Mento V3 is an evolution of the Mento Protocol, transitioning from a Reserve-backed stablecoin and swap protocol to a CDP-backed decentralized Foreign Exchange (FX) protocol. V3 enables fixed-price stablecoin swaps through a novel type of market maker contract, the FPMM (Fixed Price Market Maker), liquidity management through rebalancing strategies, and user-driven stablecoin minting through CDPs. The CDP system is based on an official Liquity v2 fork and has been upgraded to integrate seamlessly into the Mento Protocol.

Prize distribution and scoring

- **Total Prize Pool:** $60,000
- Scoring described in the competition scoring page.
- Findings Severities described in detail on our docs page.

Documentation

- Technical Documentation
- Code Walkththrough

Scope

- **Repository:**
  - https://github.com/mento-protocol/mento-core/tree/feat/mento-v3
    - 78fc103fab67e798258621e04176e25561b6f093

Build Instructions

```
cd mento-core
yarn
forge install
forge build

cd ../bold/contracts
forge install
forge build
```

Out of scope

- Previous security reports:
  - ChainSecurity Report 1
  - Chainsecurity Report 2
  - Expected behaviors such as trusted/untrusted roles and/or any accepted risks
    - Owner/Governance should be trusted
    - Liquidity Strategies are gonna be developed by only us and should be assumed trusted
  - LightChaser Reports:
    - Bold
    - Core

Basic POC test

- Mandatory POC rule applies
- Integration tests in the mento-core repo could be used for PoCs. https://github.com/mento-protocol/mento-core/tree/feat/mento-v3-dev/test/integration/v3
